

SOR FastTrack v24.7

Pre-Launch Commercial Readiness

1. Public website and app

The production-ready route design is / for the product website and /app for the field PWA. Terms, Privacy and Support pages are included. The installed PWA continues to open the app directly.

2. Launch plans

Standard: A\$39/month for one assigned private SOR Dataset and the core field workflow. Pro: A\$79/month for multiple assigned Datasets and a higher AI allowance. The website asks the server for the configured Stripe Price amounts so display and Checkout can stay aligned.

3. Account request and approval

A public user submits a request, verifies their email and waits for Admin approval. Admin chooses Standard or Pro and assigns authorised Dataset access. Billing never automatically grants a private Dataset.

4. Subscription access

Active and trialing subscriptions are allowed. Past due receives a configurable 7-day grace by default. Unpaid, cancelled or expired-grace accounts are redirected to billing recovery. Admin, explicit complimentary accounts and legacy pre-v24.7 accounts remain exempt.

Commercial safety and billing

5. Public Dataset safety

The deploy package contains only the fictional demo-sor Dataset with 12 example items and no prices. The real Ventia Dataset stays separate and is imported privately by Admin after deployment. Proprietary SOR files must not be copied into the public deploy folder.

6. Stripe billing

Users can start secure Stripe Checkout, manage billing through Customer Portal and view their own recent invoice history. Subscription state is synced to the FastTrack account while Dataset entitlements remain controlled by Admin.

7. Email and recovery

Email verification and Forgot Password use the server-side email integration. The production sender/domain must be verified before live use. Resetting a password invalidates previous account sessions.

8. Launch Readiness

Admin -> User Manager includes Launch Readiness. It checks required server configuration and separately identifies domain-stage settings without exposing secret values.

Deployment-day checklist

9. Private Dataset import

After the permanent Admin account is ready, import Ventia-SOR-Dataset-Pack-v1.5.zip through Dataset Manager. Central Dataset storage is private and account entitlements are enforced.

10. Field workflow preserved

Search, Intelligent Search, Scope Builder, Scoping Tools, Verify Scope, photos, PDF/ZIP exports, autosave, offline Dataset cache and AI Photo Scope remain available from the hardened releases.

11. Final real-domain steps

Connect the domain to Netlify; set final public URL/origin variables; configure real Stripe Standard/Pro Price IDs, webhook and Customer Portal; verify the production email sender; set legal/support details; then run Stripe Test Mode and an iPhone/PWA smoke test before opening sales.

Supervisors remain responsible for checking the final scope against site conditions, applicable contract documents and SOR Long Descriptions.
